WIRING:

DG03- *C- *-WB-82	DG03- *- *-DN-82
Note: 1. COM terminal is fitted in double solenoid valve for easiness of wiring. 2. Use an earth terminal when ground wiring is necessary. 3. Use a compressed terminal for M3. 4. Fasten the screw of the terminal with 0.5~0.7 N.m (4.3~6.1 lbs) torque.

MODULAR VALVE SERIES

SANDWICH PLATE DESIGN O2 SIZE 6

CARE IN APPLICATION :

Valve Name	Wrong Example	Correct Example	Instructions
Solenoid Operated Directional Control Valve Pilot Operated Check Valve (MPC-02-W-*10) Pressure Reducing Valve (MGV-02-B-*10)			When MGV-02-B and MPC-02-W are used together in the same circuit, the right circuit is correct, and the left is wrong, as MPC-02-W would not be totally closed.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-02-W-O-10) Pilot Operated Check Valve (MPC-02-W-*10)			When MTC-02-W-O and MPC-02-W are used together in the same circuit, MTC-02-W-O should be installed closer to the cylinder ports, otherwise the cylinder may have a "knocking" phenomenon happened.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-02-W-O-10) Pressure Reducing Valve (MGV-02-B-*10)			When MGV-02-B and MTC-02-W-O are used together in the same circuit, the right circuit is correct, and the left is wrong, as the function of MGV-02-B from B port to T port. Because MTC-02-W-O will create a pressure which will cause MGV-02-B to reduce the pressure too low, and the cylinder then can not operate with enough force or move smoothly.

STACKING EXAMPLE :

MODULAR VALVE SERIES

SANDWICH PLATE DESIGN 03 SIZE 10

CARE IN APPLICATION :

Valve Name	Wrong Example	Correct Example	Instructions
Solenoid Operated Directional Control Valve Pilot Operated Check Valve (MPC-03-W*-10) Pressure Reducing Valve (MGV-03-B*-10)			When MGV-03-B and MPC-03-W are used together in the same circuit, the right circuit is correct, and the left is wrong, as MPC-03-W would not be totally closed.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-03-W-O-10) Pilot Operated Check Valve (MPC-03-W*-10)			When MTC-03-W-O and MPC-03-W are used together in the same circuit, MTC-03-W-O should be installed closer to the cylinder ports, otherwise the cylinder may have a "knocking" phenomenon happened.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-03-W-O-10) Pressure Reducing Valve (MGV-03-B*-10)			When MGV-03-B and MTC-03-W-O are used together in the same circuit, the right circuit is correct, and the left is wrong, as the function of MGV-03-B will be affected when oil flow from B port to T port. Because MTC-03-W-O will create a pressure which will cause MGV-03-B to reduce the pressure too low, and the cylinder then can not operate with enough force or move smoothly.

CARE IN APPLICATION :

Valve Name	Wrong Example	Correct Example	Instructions
Solenoid Operated Directional Control Valve Pilot Operated Check Valve (MPD-04-W*-10) Pressure Reducing Valve (MGV-04-B*-20)			When MGV-04-B and MPD-04-W are used together in the same circuit, the right circuit is correct, and the left is wrong, as MPD-04-W would not be totally closed.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-04-W-O-20) Pilot Operated Check Valve (MPD-04-W*-10)			When MTC-04-W-O and MPD-04-W are used together in the same circuit, MTC-04-W-O should be installed closer to the cylinder ports, otherwise the cylinder may have a "knocking" phenomenon happened.
Solenoid Operated Directional Control Valve Flow Regulator with Metered Out Check (MTC-04-W-O-20) Pressure Reducing Valve (MGV-04-B*-20)			When MGV-04-B and MTC-04-W-O are used together in the same circuit, the right circuit is correct, and the left is wrong, as the function of MGV-04-B will be affected when oil flow from B port to T port. Because MTC-04-W-O will create a pressure which will cause MGV-04-B to reduce the pressure too low, and the cylinder then can not operate with enough force or move smoothly.

INSTRUCTION :

1. Place the valve body with proper leveling to achieve better control effect. It is suggested to allow the venting hole to face upward.
2. Before using, remove the screw from the venting hole to completely exhaust air in the valve body. Then tighten the screw to ensure Stable flow.
3. The flow regulation screw is used only when electric control damage occurs. In normal condition, it is reset at the original point.

Viscosity of Hydraulic Fluid: 32 mm²/s

INSTALLATION DIMENSIONS:

(Mounting Pattern ISO 4401-AB-03-4-A)

INSTRUCTION :

1. MOUNTING: BE SURE THE AIR VENT FACE UP TO KEEP THE ACTION PROPERLY.
2. TANK & DRAIN PIPING: THE TANK-LINE BACK PRESSURE AND DRAIN BACK PRESSURE DIRECTLY AFFECT THE MIN. ADJUSTMENT PRESSURE. THEREFORE, DO NOT CONNECT THE TANK OR DRAIN PIPES TO OTHER LINES, BUT CONNECT THEM DIRECTLY TO THE RESERVOIR MAINTAINING THE BACK PRESSURE AS LOW AS POSSIBLE. BE SURE THAT THE TANK AND DRAIN PIPE ENDS ARE IMMERSSED IN FLUID.
3. WHEN INITIAL ADJUSTMENTS ARE TO BE MADE OR WHEN NO CURRENT IS SUPPLIED TO THE VALVE DUE TO ELECTRICAL FAILURE OR OTHER PROBLEMS, TURN THE MANUAL PRESSURE ADJUSTMENT SCREW TO TEMPORARILY SET THE VALVE PRESSURE. IN THAT SITUATION, TURN THE MANUAL PRESSURE ADJUSTMENT SCREW CLOCKWISE, THE VALVE PRESSURE GOES UP. UNDER NORMAL CONDITION, THIS SCREW MUST BE KEPT IN ITS ORIGINAL POSITION.
4. AIR BLEEDING: TO ENSURE STABLE CONTROL, BLEED THE AIR FROM SOLENOID COMPLETELY, SET THE PRESSURE TO 20~40 BARS. BLEEDING CAN BE DONE BY SLOWLY LOOSENING ONE OF THE AIR VENTS AT THE END OF THE SOLENOID.
5. SAFETY VALVE: SAFETY VALVE PRESSURE = MAX. WORKING PRESSURE + 20BAR
