Brief Introduction

The main factory of Yuken Hydraulics (T.W.) Co., Ltd., is located at No. 12 7th Rd., Taichung Industrial Park, Taichung, Taiwan. the area is 9,543 m². 2nd factory is located at No. 6,7th Rd, the area is 5,623 m².

"To improve Technology, to improve Quality, to strengthen Service, and to satisfy Customers" are our consistent quality promises. In order to keep our promises, we have a strong focus on the promotion of automation and computerization covering sales, design, operations, production management and even quality control, to ensure quality or our products and services. All our employees pursue the organization's Goal - "To work hard, to ameliorate, and to grow perpetually."

As the domestic market was getting saturated gradually, we started exploring overseas market since July, 1996. The achievement has been remarkable. Our market is not only in Asia but also North America, Europe, Middle East and Africa.

March, 1997, Yuken Hydraulics (T.W.) Co., Ltd., was awarded ISO-9002 certificate and bulit up international-level quality system.

January, 1998, We open our second factory located at No.6 7th Rd., Taichung Industrial Park, Taichung, Taiwan, area is 5,623 m².

February, 2002, Yuken Hydraulics (T.W.) Co., Ltd., was awarded CSA-C/US certificate, to strengthen our competition in North American market.

May, 2002, Yuken Hydraulics (T.W.) Co., Ltd., was awarded ISO-9001 certificate and scaled new heights of quality system.

October, 2002, Organization simplified, management institutionalized.

June, 2003, Production line readjusted, equipment reinforced, production

rationalized, striding into a new milestone.

April, 2005, Proportional Valve was awarded CE certificate.

November, 2005, Solenoid Valve was awarded CE certificate.

November, 2008, Solenoid Valves with monitoring switches were patented in Taiwan.

March, 2009, Solenoid Valves with monitoring switches were patented in China.
June, 2010, Solenoid Valves with monitoring switches were awarded CE certificate.

December, 2011, 2nd factory's expansion is finished.

Yuken Hydraulics (T.W.) Co., Ltd. has been leading the Industry here in Taiwan. We will increase technical cooperation with our parent company, Yuken Kogyo Co., Ltd. in the future. We will build an efficient and comprehensive sales network both in domestic and overseas market, Concurrently, we will train our talented people extensively to upgrade quality continuously. All our efforts are to achieve our goal - to grow perpetually!

Name: Yuken Hydraulics (T.W.) Co., Ltd.

Main Factory: No. 12, 7th Road, Taichung Industrial Park, Taichung, Taiwan.

Website: http://www.yuken.com.tw

Taichung Office: No. 12, 7th Road, Taichung Industrial Park, Taichung, Taiwan.

(Sales Dept) Tel: 886-4-2359-3077 (Rep.)

Fax:886-4-2359-8813

Taipei Office: No. 18-1, Wun Hua 5th Road, Guei Shan Township, Taoyuan County, Taiwan.
 (Sales Dept) Tel: 886-3-328-3628 (Rep.)

Tel: 886-3-328-3628 (Rep.) Fax:886-3-328-3242

Established: 1, May, 1969

Paid in Capital: NT\$ 90,000,000 (as of January, 2004)

Line of Business: • Manufacture & sales of Hydraulic Pumps, Pressure Control

Valves, Flow Control Valves, Directional Control Valves, Modular Valves, Proportional Electro-Hydraulic Control Valves, Electro-Hydraulic Servo Valves, Power Unit, Hydraulic

Cylinders, Hydraulic Motors & Associated Products.

• Design, manufacture & installation of Hydraulic systems.

Licensor: YUKEN KOGYO CO., LTD.

General Information

Design Standard

The distinctive features of Yuken Standard products is as shown below.

Feature	Domestic Standard	Remarks	
Port Tapping	Rc(=PT)	Taper Pipe Thread (ISO 7/1)	
Port Tapping (Partial)	G(=PF)	Straight Pipe Thread (ISO 228/1)	
Pressure Gauge Tapping	Rc(=PT)	Taper Pipe Thread (ISO 7/1)	
Mounting Bolts	Metric	General Purpose Thread (ISO 261)	
Mounting Dimensions	Metric		
Conduit Entry	G(=PF)	Straight Pipe Thread (ISO 228/1)	
Solenoid Voltages AC/DC	Domestic voltage	Voltage and frequency change	
Frequency	50/60 Hz	according to country	
Electronic Amplifier Input Supply	Domestic voltage 50/60 Hz	according to country	
Graphic Symbol	ISO Standard	ISO 1219	
Valve Port Size	Inch		

Design Number

Yuken products have factory applied Design numbers, the key to which is as follows.

Example: 4222T68

Major Design No.

Design No. for modified products in Taiwan
Omitted: Domestic standard

Design numbers are subject to change. But installation dimensions and specifications remain unchanged for variation in second digit of design numbers (Minor Design No.).

Hydraulic Fluids

Type of hydraulic fluids

- Petroleum base oil-Please use anti-wear type hydraulic oil or R & O (Rust and Oxidation inhibitor) type hydraulic oil
 equivalent to ISO VG 32 or 46. Do not use VG 68 hydraulic oils in winter; it will cause suction failure or cavitation.
- · Fire resistant or other special fluids-Please consult with our sales engineers for your requirement.

Fluid viscosity and temperature range

Please use hydraulic fluids in a range which satisfies the conditions of both viscosity and temperature (specified in table.)

Type of Components	Viscosity Range	Temperature Range
Hydraulic Pumps	20 ~ 400 mm ² /s *1	0 ~ 70°
Pressure Control Valves	15 ~ 400 mm ² /s ★2	
Flow Control Valves	FG \cdot FCG : 20 ~ 200 mm ² /s 0ther : 15 ~ 400 mm ² /s	W040 300000
Directional Contro Valves	15 ~400 mm ² /s	-15~+70°
Proportional Electro- Hydraulic Control Valves	EBG : $15 \sim 400 \text{ mm}^2/\text{s}$ EFBG : $20 \sim 200 \text{ mm}^2/\text{s}$	

- 1. When starting the pumps at low speed, maximum viscosity is restricted. (see table above right).
- *2. If the valve is provided with a vent restrictor (ex.: A-BSG-03), the viscosity range should be 15-200 mm²/s.

Control of contamination

Contamination of the hydraulic fluids may cause any damage to the products or shorten the life of the products, therefore, please maintain the degree of contamination level lower than NAS Class Numbers as shown on the table 1 below

- ①The suction port line must have a reservoir type filter of 100 μm (150 mesh) and the filter should be installed minimum 50 mm higher than the bottom of the reservoir.
- 2 The return line must have a line filter.

Line type filter ratings

Type of Componetns	Line Type Filter	
Pump's Suction Port	100µm	
Circuit System	Piston Pumps: below 10μm E series components: below 20μm Other components: below 25μm	

Limit of contamination

Type of Components	NAS Class No.	
Piston Pumps	10 or less	
E series components	11 or less	
Other components	12 or less	

General Information

Limitation of general properties of fluids

Limit of fluid purity

Characteristics !	Value changed
Specific gravity (15/4°C)	0.05
Colour	2
Flash point (°C) COC	60
Total acid number (mg KOH/g)	0.2
Viscosity (eSt)	10 ~ 15

High-pressure specialized hydraulic fluid

Manufacture	Brand	
Mobil	Mobil DTE 25	
Shell	Shell Tellus Oil 46	
China Oil	Aw46 , LPS 46	

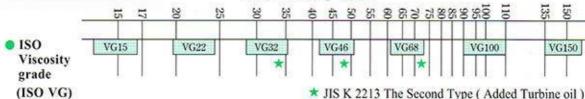

Limit of water content

Applicable conditions	Limit
Fluid becomes milky with water contained.	To be replaced immediately.
Systems in which operating fluid circulates and returns to reservoir and which are not to be stopped for a long period of time.	1000ppm
System with long piping lines in which operating fluid in circuits does not completely circulate.	500ppm
Systems to be stopped for a long period of time (Safety systems) or systems in which operating fluid in circuits moves little, and precision control systems.	300ppm

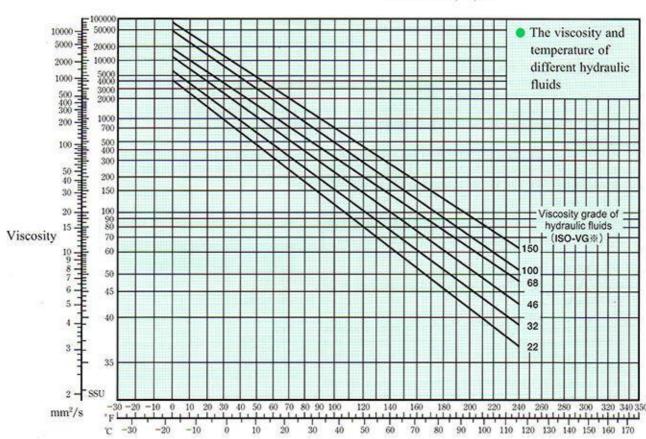

■Viscosity of hydraulic fluids

Kinetic viscosity mm²/s

JIS K 2213 The Second Type (Added Turbine oil) for ISO VG32, 46, 68.

General Information

Instructions for hydraulic pump

1. Mounting

When installing piston pumps the filling port should be positioned upwards. When (S)-PV2R Single and Double Vane Pumps are operated below 1200 r/min; we recommend the suction port upwards to suck oil easily.

2. Alignment of Shaft

Employ a flexible coupling whenever possible, and avoid any stress from bending or thrust. Maximum permissible misalignment is less than 0.1 mm. TIR (Total Indicator Reading) and maximum permissible misangular is less than 0.2°.

3. Suction Pressure

★ 1 kPa = 0.01 kgf/cm² = 7.5 mmHg

		Suc	ge	
Model			Min	
		Petroleum Water containi base oils phosphate east		Max.
Piston Pumps	ARLI AR₩	-16.7 kPa	-	+ 50 kPa
Single Pumps	50T 150T	-20 kPa	-16 kPa	+140 kPa
PV2R Single	(S)-PV2R1 (S)-PV2R2	-20 kPa		
Vane Pumps	(S)-PV2R3 (S)-PV2R4	−20 kPa *		
PV2R	(S)-PV2R12 (S)-PV2R12	-20 kPa	- 16 kPa	+30 kPa
Double Vane Pumps	(S)-PV2R13 (S)-PV2R23 (S)-PV2R24 (S)-PV2R34	−20 kPa *		

- Make sure that the height of the pump suction port is within 1m from the oil level in the reservoir.
- Please follow the instructions of catalogue to choose suitable caliber of suction port pipes; otherwise, it might lead to dangerous cavitation. We suggest the suction port flow rate under 1 m/s.

 Table 1: The limitation of Min. suction pressure for specific displacement of hydraulic pumps.

The following hydraulic pumps with rotation speed 1700 r/min are restricted by the Min. suction pressure. (Min. suction pressure of other hydraulic pumps is -150 mmHg)

N. J.IN.	Min. Suction Pressure kPa		
Model No.	1700 r/min Below	1700-1800 r/min	
(S)-PV2R3-116	-20	0	
(S)-PV2R4-237	-20	-13.3	
(S)-PV2R※3-※-76	-20	-6.7	
(S)-PV2R※3-※-94	-20	-6.7	
(S)-PV2R※3-※-116	-20	0	
(S)-PV2R※4-※-237	-20	-13.3	
(S)-PV2R34-76-%	-20	-6.7	
(S)-PV2R34-94-%	-20	-6.7	
(S)-PV2R34-116-%	-20	0	
(S)-PV2R34-116-237	-20	0	

★For some displacement of pumps, the Min. suction pressure is restricted by the rotation speed. Please refer to Table 1.

4. Instructions of Piping

① In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.

When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise. Whenever there is fear of excessive load, please use rubber hoses.

Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal pressure of less than 0.1 MPa (14.5 PSI) and surge pressure of less than 0.5 MPa (72.5 PSI). Length of piping should be less than 1 m, and the pipe end should be submerged in oil.

Recommended Drain Piping Size:

Model		Piping Fitting Size	Internal Dia. of Pipe
	ARLI, AR₩	3/8 (Internal Dia. more than Ø8.5)	more than Ø10

6. Hydraulic Pumps Starting

 Before first starting, fill pump case with clean operating oil via the filling port.

 In order to avoid air blockage when starting pumps after long time shut down, to set up air bleeding valve on the discharge sides in advance or to loose discharge piping connection area for bleeding the air in the pipes. To the best of pumps' starting with no loading. Table 2: Max.viscosity list of starting at low rotation speed

Model	Rotation speed of starting r/min	Max. viscosity mm ² /s
PV2R1 (S)-PV2R12	750	100
(S)-PV2R13 (S)-PV2R14	950	200
50T (S)-PV2R2	600	100
(S)-PV2R23 (S)-PV2R24	950	200

When temperature is under 15°C in winter or viscosity is 200–400

mm²/s (1000SSU~1800SSU), please refer to the following instructions to start pumps in order to make better internal lubrication, and it will help the suction of the pump and extend the pump's life.

 Starting instructions: to start running pumps for 5 seconds, and then stop it for 10 seconds. To repeat this process 10 times, and then keep it running.

Flow Control Valves Flow Control & Check Valves

FCG

- •These valves are pressure and temperature compensating type valves and maintain a constant flow rate independent of change in system pressure (load) and temperature (viscosity of the fluid). The valves have a digital flow adjusting dial to set the flow rate easily.
- •The valves with an integral check valve allow free oil flow from the outlet port to the inlet port.

Needle Valves

Max. Pressure 35 MPa

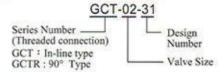

These valves can be used as a stop valve or a throttle valve to control the flow in small capacity pipelines, or can be used as a shut-off valve in pressure gauge lines.
